Talk on: SYMMETRY

Abstract: Among the many objects around us, especially those catch our attention, which are surrounded by some patterns. Many discoveries in science, and especially in Mathematics have their origin in such patterns. Since human being tries to express his feelings in his own language, Mathematicians are also not away from it. The two basic objects of Mathematics on which Mathematicians try to express their feelings are Sets and Functions; so it will not be surprising that the patterns are also expressible in terms of these basic objects. This leads to a beautiful concept in Mathematics, which is usually introduced in a very abstract language of Mathematics. In this talk, we will see an interesting way of expressing some patterns, which gives us a different way of looking at the patterns.
